State Plant Protection Service Agrochemical Laboratory:

- carry out analyses of organic fertilisers and substrates, possibly identifying:
 - reaction (pH);
 - organic matter content;
 - total nitrogen (N);
 - ammonium nitrogen (NH₄);
 - total potassium (K₂O);
 - phosphorus (P₂O₅);
- issue a test report to the customer.

Process description

Service requests

FOR TECHNICAL REASONS, THE LABORATORY DOES NOT CURRENTLY CARRY OUT AN ANALYSIS OF FERTILISERS AND SUBSTRATES. WE APOLOGISE FOR THE INCONVENIENCE.

In person

- the customer takes a sample of the fertiliser or substrate and delivers it to the Agrochemistry Laboratory of the State Plant Protection Service

Sampling requirements:

- take 5 to 10 samples from different sites but not from the surface. The samples taken at the individual points shall be placed in a bucket, thoroughly mixed and one intermediate sample shall be taken from the mixed sample. For liquid fertilizers (e.g. slurry, digested, etc.), approximately 3 litres are required for testing, and for solid fertilizers approximately 2 kg.
- if liquid fertilizers are taken, they shall be mixed in the whole volume (whole storage or tank) before sampling.
- if the fertiliser is intended to be dispersed on the field, the sample shall be taken before dispersal.

- depending on weather conditions and air temperature, it may be necessary to keep it in the cold after sampling.

Detailed information is available on the website of the State Plant Protection Service: <https://www.vaad.gov.lv/lv/augsnes-meslosanas-lidzeklu-and-substrated-l...>

Payment for service

The service shall be paid in accordance with the invoice of the State Plant Protection Service, which has been issued on the basis of Annex 2, paragraph 31, of Cabinet Regulation No. 493 of 12 July 2012, "Price List for Payment Services of the State Plant Protection Service".
