- heat treatment and labelling of wood and wood packaging material
- produce wood packaging material, undergo heat treatment and label it

Get a service

On-site

In order to limit the risk of spreading quarantine organisms, packaging material produced from raw wood intended for the transport of goods (pallets, boxes, repositories, packaging boxes, cable spools, coils, cargo anchorages) must be subjected to phytosanitary measures such as heat treatment and labelling.

Wood packaging material may be labelled prior to heat treatment if it is part of the technological process and it is ensured that heat-treated material cannot be mixed with heat-treated material and that an appropriate authorisation has been obtained.
